# PRESSES & HEAD FORMING

IMCAR engineered, designed and manufactured head presses and flanging machines allow IMCAR clients to count on the same reliability, ease of use, convenience and industrial grade equipment for their head forming and flanging needs as they have come to expect and trust from their other IMCAR products.

**400 TON PRESS**

- Our standard head press line reaches up to 1,000 Ton capability, with higher tonnage requirements available on request.
- Built to rugged and industrial standards synonymous with IMCAR products, these presses provide efficient production, high quality and unparalleled durability.
- Combining IMCAR presses and manipulators allows full production of flanged and dished head production.
- IMCAR press and manipulator designs allow ease of use and function to be controlled by a mobile control console, easily operated by only one technician.
- IMCAR press manipulators allow single function or multi-stage programs for various steps to be conducted automatically in allowing for complete head production from steel sheet or plate to completed head.
- IMCAR utilizes a unique design for the main cylinder hydraulic thrust, therefore reducing stroke time and increasing overall production speed and efficiency.
